PROJECT CASE STUDY

Data Refinery for Dentsu International

87
supported data sources

1-2 days
new source enablement incl. QA

Fragmented campaign data became a governed data activation platform.

CHALLENGE

Manual reporting was limiting decision speed.

- Data was scattered across operational teams and source systems.
- Spreadsheet joins had to be repeated whenever source data changed.
- Manual handling created error risk and slowed insight generation.
- Teams lacked one trusted customer and campaign view.

Business value

87 supported sources, new source enablement in 1-2 days including QA, reusable recipes, and multi-channel delivery.

WHAT WE BUILT

LOW-CODE DATA OPS

A three-app operating model for connectors, transformation, and self-service delivery.

01 Connectors App
Authorize and configure 87 sources, then schedule automated fetches through Adverity

→

02 Trifacta recipes
Create transformation recipes when raw source data needs cleaning, joining, or enrichment

→

03 Data Serve UI
Serve curated data through downloads, scheduled delivery, and direct third-party access

87 supported sources
TikTok, Apple, YouTube, Snapchat, Pinterest and other media sources

Fast new-source setup
New data sources can be enabled in 1-2 days, including QA testing

Transformation recipes
Optional Trifacta flows for cleansing, shaping and enrichment

Self-service download
Users can directly download curated data to their computer

Scheduled delivery
Auto-fetch and delivery to S3, GCP, ADLS, Snowflake, SFTP and more

Third-party access
Connect directly to Power BI, Tableau, SQL clients and similar tools

Enterprise activation channels

Direct download | S3 | GCP | ADLS | Snowflake | SFTP | Power BI | Tableau | SQL clients

Governed data served to users, storage platforms, and analytics tools.
